

**Aim:**

Write a python program to find the maximum value of given two numbers using ternary operator.

**Input Format:**

- First line should prompt the user to enter first integer
- Second line should prompt the user to enter second integer

**Output Format:**

- Output should print the maximum value using ternary operator

**Source Code:**

ternary.py

```

a=int(input())
b=int(input())
if a>b:
    print(a)
else:
    print(b)

```

Execution Results - All test cases have succeeded!

| Test Case - 1 |
|---------------|
| User Output   |
| 91            |
| 123           |
| 123           |

| Test Case - 2 |
|---------------|
| User Output   |
| 15            |
| -23           |
| 15            |
